

# Pazel Cloud

2021 - Multi-platform (website, tablet & phone)

**Role:** UI/UX Designer Freelance

**Stakeholders:** team lead & company C-level

**Pazel Cloud** is an internal POS system to support and optimize Pazel Group business. This system will help their data management, especially those related to transactions and inventory.

Definition of Point of Sale (POS) system:

**A system that accommodates the processing & recording of transactions between a company and their consumers, at the time in which goods and/or services are purchased**

# My Design Process

## 1. Research and Define

As a freelancer, my first work is to get a complete brief about their needs. Afterwards I collect data from Pazel Group to understand the problems.

## 2. Ideate and Build

Look for solutions based on the problem, brief and the data I have collected. Afterwards I designed some solutions to be presented to stakeholders (Pazel Group).

## 3. Review

Stakeholders evaluate my work to ensure that I meets their expectations and needs. They also check their competencies for developing these applications.

# User Research

## In-depth interview

5 respondents from Pazel Group:

- 2 respondents are cashiers
- 2 respondents are tenant managers
- 1 respondent is a Pazel Group Tech Lead

## Objective

- To find out how Pazel Group has been working all this time
- To know stakeholder's motives from this project
- To understand respondents expectations of the POS system

## Result

In a fast-paced FnB business, it is crucial to remain organized, especially during the very busiest times. Customers never want to wait for too long to complete their purchase. In addition, the cashier staff works long shifts with an application that does not accommodate their needs, so the risk of human error is quite high. All of these conditions can lead to inaccurate data storage.

# Design Directions

By having a centralized database POS system, they can quickly assign the order to a customer, store data with minimal effort and they can optimize their business.

Therefore those who will be using this system are:

- 1 Cashier
- 2 Tenant manager
- 3 Tenant owner
- 4 Back office

# Competitive Analysis

## Objective

- To gain a deeper understanding on how the POS system works
- To find out strengths & weaknesses from our competitors
- To find out another design pattern and insight to design this product

## Results

- The majority of POS systems only provide 2 apps: for cashiers and tenant owners
- POS system mainly focused on 2 things:
  - Needs of ordering and transactions (for cashier)
  - Tenant management (for tenant owner)

# Product Specifications

- 1** Cashier app (Android - tablet)  
This application aims to help cashiers to handle customer orders and transactions.
- 2** Tenant Manager app (Android - phone)  
This application aims to help tenant managers to manage available menus and incoming orders.
- 3** Tenant Owner app (Android - phone)  
This application aims to enable tenant managers to view and analyze their tenant sales reports.
- 4** Back Office web (website)  
This website aims to manage Pazel Group internal data.
